                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4740 5414: contig of 675 bp in length 5415 5514: gap of 100 bp 5515 6290: contig of 675 bp in length 5291 6390: gap of 100 bp in length 6791 contig of 681 bp in length 771: contig of 681 bp in length 772 771: contig of 681 bp in length 783: contig of 682 bp in length 784 7953: gap of 100 bp 54 8627: contig of 682 bp in length 784 7953: gap of 100 bp 784 7953: gap of 100 bp 785 8627: contig of 682 bp in length 785 8627: contig of 682 pp in length 785 8627: contig of 682 8627: contig

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         100 bp

* Sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low Pass Sequence sampling is useful for
identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
                                                                                                                                                           Length 80669;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ..

Direct Submission
Submitted (15-SEP-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TY 77030, USA
On Dec 20, 2001 this sequence version replaced g1:15624602.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   * NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* Consists of 65 contigs. The true order of the piaces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* truns of N. but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Consensus quality: 115371 bases at least 040 Consensus quality: 123148 bases at least 030 Consensus quality: 129020 bases at least 020 Estimated insert size: 114258; sum-of-contigs estimation Quality coverage: 0x in Q20 bases; agarose fp estimation Quality coverage: 1.6x in Q20 bases; sum-of-contigs estimation

                                                                        a human norepinephrine transporter gene. The specification a method for screening for susceptibility to sub-optimal norepinephrine transport in a subject. The method comprises obtaining a biological sample from the subject and detecting a polymorphism of a norepinephrine transporter gene in the sample from the subject, the presence of the polymorphism indicating the susceptibility of the subject to sub-optimal norepinephrine transport. The method is useful for screening for susceptibility of a subject to orthostatic intolerance. Norepinephrine transporter genes are useful for gene therapy for modulating norepinephrine transport in a target cell and treating susceptibility.
                                                                                                                                                                                                                                                        to impaired norepinephrine transporter function, orthostatic intolerance or other relevant diseases in humans and animals such as mental illness,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Single nucleotide polymorphism; SNP; biallelic marker; human; ds; central nervous system disorder; CNS; NET; norepinephrine transporter.

The specification a method for screening for susceptibility to sub-optimal norepinephrine (NE) transport in a subject. The method comprises obtaining a blological sample from the subject and detecting a polymorphism of a norepinephrine transporter gene in the sample from the subject, the presence of the polymorphism indicating the susceptibility of the subject to sub-optimal norepinephrine transport. The method is useful for screening for susceptibility of a subject to orthostatic intolerance. Norepinephrine transporter genes are useful for gene therapy for modulating for norepinephrine transporter function, orthostatic intolerance to impaired norepinephrine transporter function, orthostatic intolerance or other relevant diseases in humans and animals such as mental illness, hypertension, heart disease, psycho stimulant abuse e.g. cocaine or

```
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical immaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymorleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                              Key
                                                              The present sequence encodes a human norepinephrine transporter. The specification a method for screening for susceptibility to sub-optimal norepinephrine (NE) transport in a subject. The method comprises obtaining a biological sample from the subject and detecting a polymorphism of a norepinephrine transporter gene in the sample from the subject, the presence of the polymorphism indicating the subsectibility of the subject to sub-optimal norepinephrine transport. The method is useful for screening for susceptibility of a subject to orthostatic intolerance. Norepinephrine transporter genes are useful for gene therapy for modulating norepinephrine transport in a target cell and treating susceptibility to impaired norepinephrine transporter function, orthostatic intolerance or other relevant diseases in humans and animals such as mental illness, hypertension, heart disease, psycho

                                                                                                                                                                                                                                                                                      for gene therapy for modulating norepinephrine transport in a target cell and treating susceptibility to impaired norepinephrine transporter function, orthostatic intolerance or other relevant diseases in humans and animals such as mental illness, hypertension, heart disease, psychostimulant abuse e.g. cocaine or amphetamine abuse.
The present sequence encodes a human norepinephrine transporter. The specification a method for screening for susceptibility to sub-optimal norepinephrine (NB) transport in a subject. The method comprises obtaining a biological sample from the subject and detecting a polymorphism of a norepinephrine transporter gene in the sample from the subject, the presence of the polymorphism indicating the subject to sub-optimal norepinephrine transport. The method is useful for screening for susceptibility of a subject to orthostatic intolerance. Norepinephrine transporter genes are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .

The transfected clones were in the form of expression vectors (pXM) transfected clones were in the form of expression vectors (pXM) an SV-40 replication origin to enable amplification. Transfectants of these cells expressing the norepinepherine cells expressing the norepinepherine analogue m-iodobenzylguanidine (m-IBG) is accumulated intracellularly by SK-N-SH cells expressing the intext WT. The accumulated radiolabelled m-IBG allows direct autoradiographic visualisation of transporter expressing the cransfectants. DNA was rescued from positive colonies and the resulting plasmid pools rescreened and subdivided until a single clone was obtd. Transfected cells become capable of norepinepherine CC upcake, which may be inhibited by various drugs, e.g. cocaine, to a degree similar to the effect of such drugs on noradrenergic concurs. The cloned cDNA makes possible well-controlled studies concurs in the without the abfuscating influence of other transporters in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (GS) identified by DNA chip analysis as given in the specification, and comparing the expression level in an unactivated at expression level in an unactivated activation level to an expression of GS is indicative of GCA. Also included are modulating (M2) GA by contacting GCA with an agent that alters the expression of at least one gene in GS; (2) screening (M3) for an agent capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the cubject to a pathogen or sterile inflammatory disease, by detecting the chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the cubject to a pathogen or sterile inflammatory disease, by detecting the cubject to a pathogen or sterile inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an agent that modulates the expression of gene(s) from GS in the tissue. MI is useful for detecting an agent capable of modulating corresponse in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, (e.g. psoriasis, rheumatoid arthitis, and and inflammation injury, ARDS, adult respiratory distress syndrome, response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, (e.g. psoriasis, rheumatoid arthitis, periodontal disease, also bacterial infection, viral infection, contining the proposition of the paralled infection of the paralled of paralled or periodontal disease, also bacterial infection and MS is the paralled or the paralled or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did not form part form the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  genes involved in central nervous system (CNS) disorders (see MARBARG-AAHB8RO). The markers have a single nucleotide polymorphism (SNP) and are useful in determining the genetic predisposition of individuals to CNS disorders, by identifying the nucleotides at a set of genetic markers in a biological sample, where the markers comprise at least one CNS disorder related marker. The present sequence was used to illustrate the invention.

ABN15762 to ABN27252 encode the human ORFX proteins given in ABP0010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX associated disorder. ORFX polynucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperpoliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders has neurodegenerative disorders disorders has constructed in the transplantation, cardiovascular diseases, disorders related to organ transplantation, cardiovascular diseases, disbetes mellitus, systemic lupus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious
                                                                                                                                                                                            cardiovascular disease; diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyroidism; cholesterol ester storage disease; immune deficiency; immune disorder; infectious disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence data for this patent did not form part of the printed fication, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       diseases, autoimmune disorders such as multiple sclerosis, rheumatoid arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP4328) and to cDMAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 90% identical and polynucleotides 90% identical to the sequences of the invention. The invention additionally relates to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polynucleotides, antibodies and polypeptides in diagnosing of ovarian antigen polynucleotides and polypeptides in diagnosing. Irrating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system castatic ovary syndrome, ovarian cysts, and dysmenorihoea, endocrine disorders (e.g., infertility, disorders of pregnancy, anovulation.

Cliscoters, infections (e.g., chlampida, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and vaginitis), immune disorders (e.g., congenital and acquired immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus), but all and acquired independence (e.g., chlampida, HIV) toxoplasmosis, and confidence immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus), but all and acquired insorders (e.g., congenital and acquired blood-related disorders (e.g., anaemia), cardiovascular disorders, (e.g., anaemia), cardiovascular disorders), and encorders (e.g., anaemia), cardiovascular disorders, encorders (e.g., anaemia), cardiovascular disorders, autoimmune disorders (e.g., anaemia), cardiovascular disorders, autoimmune disorders (e.g., anaemia), cardiovascular disorders, autoimmune disorders (e.g., anaemia), cardiovascular disorders (e.g., anaemia), cardiovascular disorders (e.g., anaemia), cardio

Ovarian antigen polypeptides and polynucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may further be used for gene therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents cDNA encoding a human ovarian antigen of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 nvention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequences from the Coryndrom acterium coryndrom and process are useful for identifying the mutation point of a gene derived from a mutant of coryndrom bacterium, measuring expression amount and amulant of coryndrom bacterium, measuring expression pattern of a gene derived from Coryndrom bacterium, and identifying a homologue of a gene derived from coryndrom bacterium. Coryndrom bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (ABB57737-ABB72072).
The sequence data for this patent did not form part of the printed
specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

specification.
The 20.5 gene, also referred to as Tea, identifies transcripts found in only a limited number of tissues. Tea transcripts are induced in splenocytes activated with the T cell mitogen ConA. Unlike other known genes expressed in activated T cells, the Tea gene appears to encode a protein which traverses the membrane multiple times, whereas the large number of known integral membrane protein which are induced in T cell activation are single membrane spanning proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                         (without alignments)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 137, Application US/08290665A
Patent No. 582852
GENERAL INFORMATION:
APPLICANT: BUKH, J., MILLER, R.H. AND
APPLICANT: PURCELL, R.H.
TITLE OF INVENTION: NOCLEOTIDE AND DEDUCED
TITLE OF INVENTION: CORE GENES OF ISOLATES OF
TITLE OF INVENTION: CORE GENES OF ISOLATES OF
TITLE OF INVENTION: SEQUENCES IN DIAGNOSTIC MENUMENT OF SEQUENCES IN DIAGNOSTI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  93.3%; Score 14; DB 5;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0; Mismatches
                                                                                                                                                                                                                                                                                                                                                                                        MEDIUM TYPE: Floppy disk

TITLE OF INVENTION: DNA encoding methymycin and pikromycin
FILE REFERENCE: 600.438US1
CURRENT APPLICATION NUMBER: US/09/105,537A
CURRENT FILING DATE: 1998-06-26
NUMBER OF SEQ ID NOS: 43
SOFTWARE: FastSEQ for Windows Version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Indels

Sequence 747, Application US/09822827

Patent No. US20020081680A1

GENERAL INFORMATION:

APPLICANT: Xu, Jiangchun

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY AND TITLE OF INVENTION: DIAGNOSIS OF PROSTATE CANCER

FILE REFERENCE: 210121.534C1

CURRENT APPLICATION NUMBER: US/09/822,827

CURRENT PILLION DATE: 20011-03-28

NUMBER OF SEQ ID NOS: 982

SOGTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 747

LENGTH: 738
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              APPLICANT: Hural, John

GENERAL INFORMATION:
TITLE OF INVENTION: DNA Fragment Carrying Toluene Monooxygenase Gene,
TITLE OF INVENTION: Recombinant Plasmid, Transformed Microorganism,
TITLE OF INVENTION: Method for Degrading Chlorinated Aliphatic Hydrocarbon
TITLE OF INVENTION: Compounds and Aromatic Compounds, and
TITLE OF INVENTION: Compounds for Environmental Remediation
